frameworks

jQuery Mobile

jQuery Mobile framework provides a way to design a touch-optimized web app with easy-to-understand syntax. Our page layout and styles all rely on jQuery Mobile.
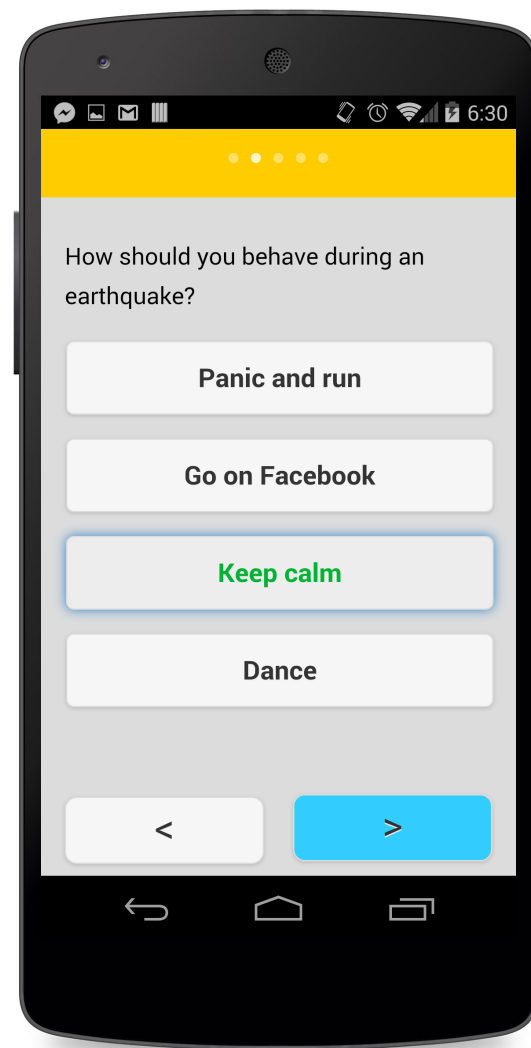

React.js

React.js lets us generate reusable pages that can be loaded very efficiently with short code. All of our pages are reusable components in React.js.

Which belongs in an earthquake emergency supplies package?

Meat loaf

Watermelon

Trail mix

Pineapple

css + icons

CSS Shake

CSS Shake is a framework that provides an easy way to shake elements using CSS animations. We made things shake to fit with the theme of this application.

Custom CSS

We also wrote quite a bit of our own CSS to make this application look the way we want it to look.

Icons

Our icon styles are inspired by current mobile operating systems so that users will feel right at home when they are using our web app.

How should you behave during an earthquake?

Panic and run

Go on Facebook

Keep calm

Dance

<   >

Score

```
var score = 0;
var numberOfQuestions = 5;

function addScore(pageAnswered, correct) {
        if (!pageAnswered && correct)
        {
                score++;
        }
}

function scorePercentage() {
        return (score / numberOfQuestions) * 100;
}
```

Message

```
//win
if (scorePercentage() >= 50)
{
        document.getElementById("readiness").innerHTML = "You are prepared for an earthquake!";
}

//lose
else
{
        document.getElementById("readiness").className = "shake shake-constant shake-hard";
        document.getElementById("readiness").innerHTML = "You are NOT prepared!";
}
```

wrap up
